

## ***Legal Disclaimer for TRANSCAER Liquefied Natural Gas (LNG) Safety and Emergency Response Training***

The TRANSCAER<sup>SM</sup> LNG Safety and Emergency Response Training is intended to provide representatives from the emergency responder community, emergency management agencies, and other relevant government personnel at the local, state, and federal levels with information to supplement their knowledge and expertise regarding the planning, preparedness, mitigation, and recovery for LNG emergencies.

Due to the limited format and time available, as well as site-specific circumstances impacting LNG safety and emergency response, it is impossible for this training to cover everything necessary to ensure a safe response. Thus, this training information must be understood as a general tool for helping address LNG incidents, rather than a prescriptive pathway or exhaustive statement of obligations. It does not create legal rights or obligations. Attendees of the training must determine whether any particular action is appropriate or required for their individual situations and consult with legal counsel concerning applicable legal requirements.

The training is provided for informational and educational purposes only. The American Chemistry Council, TRANSCAER, the Center for Liquefied Natural Gas, the American Petroleum Institute, the Federal Railroad Administration, the Pipeline and Hazardous Materials Administration, and the instructors delivering the materials make no representation or warranties either express or implied with respect to the accuracy or completeness of the training or to any certification of your department, and assume no liability of any kind resulting from the use or reliance upon any information, procedure, conclusion or certification contained in or resulting from the training. Certifications and regulations vary from state to state as well as from county to county across the United States. You must only respond to incidents within your scope of training and there is likely need for instruction beyond the scope of this training course.

Over time, regulators will modify rules, regulations, and interpretations considering new technology, information, or circumstances; to keep apprised of such developments, or to review information on a wide range of LNG and emergency response topics, you can visit regulatory websites and other resources.
